Modern air
curtains

FLOWAIR R&D lab

FLOWAIR – expert and manufacturer of HVAC equipment is a member of the EUROVENT Europe's Industry Association for Indoor Climate. This organisation brings together the largest companies in the industry, which jointly create new guidelines and recommendations that are eventually presented to the European Commission. The Association is looking for solutions related to energy savings inside buildings and the use of air curtains is one of recommended solutions.

The use of air curtains allows for thermal protection of the room. Curtains create an air barrier in the door opening and reduce heat losses / heat gains resulting from the inflow of cold air from outside in the winter, as well as inflow of warm air into the air-conditioned rooms during the summer. Presently, the regulations regarding energy losses when the doors are opened are not very clear.

A special project group at EUROVENT is currently developing a methodology for testing and describing air curtains in terms of their effectiveness to get a reliable comparison of their parameters. FLOWAIR – the only Polish producer participating in the project group has created a test stand to measure the effectiveness of air curtains. Based on the tests carried out and subsequent results, new tools will be created to simplify making informed investment decisions. Simply put, to help the end clients choose a proper solution.

Advantages of laboratory testing for the client

At FLOWAIR, we constantly undertake activities aimed at increasing the quality of our products and services. A laboratory test is yet another step on the way to continuous product improvement and greater customer satisfaction.

- Confirmed parameters
- Reliable comparison
- Energy-saving
- Lower risk of investment

Compare ELiS solutions

Air curtains FLOWAIR is a wide range group of units adapted to various types of commercial and industrial facilities. Depending on the characteristics of the building, it is possible to select a device to individual needs.

N – without heating elements („ambient”)

W – water heat exchanger

E – electric heaters

— speed limit at the floor level

■ – outlet air velocity

powder coated steel

### Device types available

- 4 lengths: 1 m, 1.5 m, 2 m, 2.5 m
- 2 versions: air curtain with a 3-row water heat exchanger (3R) and curtain with a 4-row water heat exchanger (4R)
- range: AX36 – maximum range 3.6 m and AX45 – maximum range 4.5 m

### Dimensions

CAD drawings, Revit files and other documents for all models are available at [www.flowair.com](http://www.flowair.com)

ELiS AX W-100

ELiS AX W-150

ELiS AX W-200

ELiS AX W-250

\*acoustic pressure level is given for a 1500 m<sup>3</sup> room with an average sound absorption capacity, at a distance of 5 m from the device

## Application

The AX air curtains are used both in commercial buildings and in smaller industrial buildings, such as:

- shopping malls
- shops
- restaurants
- car showrooms
- public-use facilities
- small-scale production floors and warehouses

<sup>(1)</sup> In accordance with ISO 27327-1, air flow is given for fan speeds between 25% and 100%.

<sup>(2)</sup> Acoustic pressure level is given for a 1500 m<sup>3</sup> room with an average sound absorption capacity, directivity factor Q=2, at a distance of 5 m from the curtain

<sup>(3)</sup> In accordance with ISO 27327-2, acoustic power level is given for fan speeds between 25% and 100%

<sup>(4)</sup> The range of powers and temperatures is given for the following parameters: fan speed 25%, temperature of the heating medium 60/40°C, temperature of air at the inlet to the device 18°C - fan speed 100%, temperature of the heating medium 60/40°C, temperature of air at the inlet to the device 18°C.

## Installation ELiS AX

A – min. 10 cm

B – max. 3,6 m (ELiS AX36), max. 4,5 m (ELiS AX45)

## Installation elements

### Installation brackets enable vertical mounting

Brackets for vertical mounting. Air curtains may not be mounted vertically on top of each other. Available in white.

### Consoles and threaded rods enable horizontal mounting

Consoles enable horizontal mounting (air curtains with a length of up to 2 m are mounted using two consoles, while curtains with a length of 2.5 m are mounted using three consoles). Available in white.

## Connection diagrams ELiS AX

## Intelligent control system

The ELiS AX air curtain has a built-in DRV ELiS EC module that enables intelligent managing operation the T-box Zone controller. It is possible to control the operation of the device using two types of BMS:

- simple control signals: start-stop-failure
- control automation with output to the BMS system (Modbus RTU) or SYSTEM FLOWAIR

## ELiS AX device features

### OPTIflow technology

The OPTIflow technology involves directing the air flowing through the curtain in the right way, thus creating an even more effective air barrier during draughts in commercial buildings. Three outlet air streams create a highly efficient barrier against external factors, such as hot and cold air, dust and airborne contaminants. Even and matched airflow throughout the entire exchanger ensures a comfortable temperature and reduced energy consumption

### OPTIsmart technology

This technology involves advanced smart automation, which enables precise temperature adjustment. It changes the mode of operation depending on external conditions. It adjusts the air flow of the air curtain depending on the difference in temperatures and intelligently adapts the operating time of the device depending on how often the door is opened.

#### Air filter

The ELiS AX air curtain can be used in buildings which require installation of devices equipped with a replaceable air filter. It is equipped with a replaceable ISO Coarse 30% filter which improves the air quality, and the device is protected against the ingress of dirt and other contaminants.

#### EC fan

The device is equipped with silent and energy-efficient EC fans, which enable smooth adjustment of the curtain's air flow.

V – Air flow

PT – Heat capacity

Tp1 – Air temperature at the inlet to the device

Tp2 – Air temperature at the outlet of the device

Tw1 – Heating medium temperature at the inlet to the heat exchanger

Tw2 – Heating medium temperature at the return from the heat exchanger

Qw – Heating medium flow rate in the heat exchanger

Δpw – Pressure drop in the heat exchanger

Select units for other parameters using ours selection programs  
available at [www.flowair.com](http://www.flowair.com)

## Air curtains Slim

**Range**  
up to 4,0 m

**Airflow**  
750 - 3000 m<sup>3</sup>/h

**Weight**  
14,7 - 26,9 kg

**Heating capacity**  
1,2 - 29,3 kW

**Colors**  
White with black elements  
and deep black

**Casing**  
Steel

### Device types available

- 3 lengths - 1 m; 1,5 m or 2 m
- 3 versions: W – water heat exchanger, N – without heating elements („ambient”), E – electric heaters

### Application

The Slim curtain will work wherever doors are often opened, in shops, restaurants, service salons. Slim fits 99% of door openings. The curtain is designed for horizontal installation

directly above the door opening and for vertical installation at the side parts of the opening.

### Dimensions

CAD drawings, Revit files and other documents for all models are available at [www.flowair.com](http://www.flowair.com)

**C** – max. 4.0 m

## Installation elements

### Brackets for Slim

For horizontal or vertical installation of the Slim air curtain.

Available in white or black.

### Rods

In standard Slim air curtains have special mounting holes for installation with threaded rods.

# Connection diagrams Slim

## Plug&Play control

## TS controller

## T-box controller

## Available options upon request

### TS + motion sensor

The solution will prove useful if you frequently change the curtain's settings and want to have the controller at your fingertips. Select the TS controller, which ts as a thermostat and switches on the heating elements.

### TS + door sensor

This solution will prove useful when the motion sensor cannot operate freely due to some obstacles (e.g. a suspended element under the air curtain). In this case the devices' control depends on the signal from door sensor.

### T-box

This solution will be useful when you want to connect the curtain to an intelligent building management system BMS. Choose this option if you need a weekly programmer or remote supervision over the operation of devices.

V – Air flow

PT – Heat capacity

Tp1 – Air temperature at the inlet to the device

Tp2 – Air temperature at the outlet of the device

Tw1 – Heating medium temperature at the inlet to the heat exchanger

Tw2 – Heating medium temperature at the return from the heat exchanger

Qw – Heating medium flow rate in the heat exchanger

Δpw – Pressure drop in the heat exchanger

## Air curtains ELiS B

Device types available

- 3 lengths - 1 m; 1,5 m or 2 m
- 3 versions: W – water heat exchanger (1- or 2-rows), N – without heating elements („ambient”), E – electric heaters

Application

ELiS B air curtains are dedicated for shops, restaurants, exhibition rooms. Units are designed for installation in the

ceilings. Advantage is the possibility to install in the existing ceiling without cutting additional holes.

available at www.flowair.com

Air curtains ELiS G

Range

8 m

Air flow

2400 - 12800 m³/h

Weight

43,0 - 77,9 kg

Heating capacity

7,8 - 71,9 kW

Color

Grey, silver

Casing

Galvanized steel

Device types available

- 3 lengths – 1,5 m; 2 m or 2,5 m
- 3 versions: W – water heat exchanger (1- or 2-rows), N – without heating elements („ambient“), E – electric heaters

Application

Warehouses, halls, logistics centers. ELiS G devices are intended for horizontal and vertical installation. They create an air barrier that reduces the various losses associa-

ted with the exchange of air between the room and the outside area.

Dimensions

CAD drawings, Revit files and other documents for all models are available at www.flowair.com

Control elements

TS controller – basic version

Simplest regulation of 3-step fans. Fan heater operation is controlled by 3-step fan speed controller with thermostat.

T-box controller – BMS version

Intelligent regulation system of 3-step fans. Speed regulation of energy-efficient fan via T-box controller.

T-box Zone controller – BMS version with zones

T-box is an advanced intelligent touch screen controller with zoning function..

- controls up to 31 units or zones
- weekly programmer for each zone
- individual temperature setting for each zone

Installation elements for air curtains

Brackets ELiS AX

Console for vertical installation up to 2,5 meters . No possibility of joining curtains together.

White brackets for horizontal installation.

- up to 2 meters curtains - 2 brackets

- 2,5 meter curtain - 3 brackets

Brackets Slim

For horizontal or vertical installation of the Slim air curtain. Available in white or black.

SYSTEM FLOWAIR

The SYSTEM FLOWAIR is a complete range of heating and ventilation devices integrated by a single controller. The T-box Zone controller allows up to 31 devices from the range to work together in 31 independent zones.

ELiS AX operates within the SYSTEM

LEO – Fan heaters

LEO D – Desratrificators

ELiS and Slim – Air curtains

OXeN – Ventilation units with heat recovery

Cube – Rooftop devices

Integration and interoperability of devices

The T-box Zone smart touch controller has a number functions necessary to effectively manage the operation of the heating and ventilation system that until now were restricted to extensive Building Management Systems (BMS).

The SYSTEM enables devices to work together to ensure a higher thermal comfort and improve energy efficiency. The combined operation of heaters and destratifiers makes it possible to effectively utilise heat from the upper parts of the room, while saving the heat energy supplied by the heaters.

Interoperability with heat pumps

The ELiS AX air curtain is an energy efficient solution, in line with the green trends and the zero-emission policy. It is equipped with a 3- or 4-row water heat exchanger, which works together with low-temperature heat sources. It can be supplied with a low-temperature heating medium (60–40°C).

Advanced control ensures service-free interoperability with heat pumps. Another advantage of the solution is that it uses water as the heating or cooling medium, which increases safety and decreases the impact on the environment compared to air conditioning systems which use CFCs.
